EDUCATION

University of South Carolina, School of Engineering & Computing – Columbia, SC

Graduation Date: December 2027

Bachelor of Science in Mechanical Engineering — Cumulative GPA: 3.4/4.00

University of South Carolina Upstate – Spartanburg, SC

August 2021 - May 2025

Dual Enrollment Credit — Cumulative GPA: 3.5/4.00 — Accumulated 84 college credits during High School

PROFESSIONAL EXPERIENCE

Center for Industry Solutions | Columbia, SC

Intern

August 2026 - Present

- Redesigned the self-centering docking mechanism from a 4-motor to a 2-motor lead-screw system, cutting motor count 50% while maintaining alignment tolerance.
- Engineered a contact-based charging system (pogo-pin drone legs, 4-plate copper pad, bridge rectifier) that resolves charging polarity across any landing orientation without added sensors.
- Built and programmed an Arduino Uno state machine to coordinate landing detection, alignment, and charging across dual stepper motors and a pressure-sensor trigger, sourcing the full charging station prototype with a \$300 budget.
- Manage a team of 3 fellows as Project Manager, running design reviews and weekly check-ins to keep the project on a 10-week schedule.

Engineering Fellowship

October 2025 - May 2026

- Modeled mechanical components in SolidWorks, Creo, and CATIA and fabricated functional prototypes on Bambu Lab 3D printers.
- Completed 2 certifications in deep learning and computer vision for industrial inspection applications.
- Collaborated with a 5-person team to design the initial drone docking and charging concept, later scoped into the Intern-phase build.
- Gained exposure to digital twins through Siemens Process Simulate.

Piedmont Mechanical, Inc. | Mechanical Engineering Intern | Spartanburg, SC

May 2026 - August 2026

- Conducted 10+ field site visits across 2 industrial/commercial HVAC projects, coordinating with project managers to resolve field issues and keep installs on schedule.
- Reviewed a \$134,500 mechanical subcontract, flagging 3 contract risk clauses before execution to protect project terms.
- Resolved a field discrepancy on a wall-diffuser installation against submittal specs after holes were pre-cut, confirming correct equipment to prevent rework.
- Diagnosed an oversized offset using laser-measured reference points off each wall and the ceiling, then calculated the exact cut length in SolidWorks to give the fabrication shop a corrected dimension.

Toll Solutions | Intern | Duncan, SC

May 2024 - August 2025

- Performed ATR tests on over 1,000 products and raw material samples to support database development and unknown sample identification.
- Followed lab safety and quality control procedures while supporting day-to-day operations.

EXTRACURRICULARS

Carolina Sales Institute for Engineering and Technology | Columbia, SC

August 2025 - Present

- P.A.T.H. Course Certification, a 12-week live, interactive training program designed to equip aspiring professionals with the technical, business, and customer-facing skills necessary to succeed as a sales engineer.
- Competed in Nucor Sales Pitch competition selling to sales managers in Nucor.
- Placed 1st at the Microsoft Sales Competition.

SAMPE | Columbia, SC

January 2026 - Present

- Designing and manufacturing carbon fiber epoxy reinforced I-beams for SAMPE 2026 student bridge design competition, optimized for minimal weight while targeting load bearing capacities of 7200 lb.
- Serve as social media outreach lead, growing visibility for the SAMPE 2026 bridge design competition team.

TECHNICAL SKILLS

SolidWorks (Associate) • Creo Parametric (Associate) • Arduino (Associate) • Excel (Associate) • Outlook (Intermediate) • Finite Element Analysis (Elementary) • MATLAB (Elementary) • Python (Elementary)
